EDUCATION

University of Computer Studies, Yangon

Bachelor of Computer Science

Second Year | 2026 – Present

Expected to enter Third Year after the upcoming university break.

CORE SKILLS

AI & Automation

- AI Workflow Design
- AI Agents
- LLM Applications
- RAG / Knowledge Retrieval
- Prompt Engineering
- Business Process Automation
- Human-in-the-Loop Workflows
- Structured AI Output
- API & Webhook Integration

Automation Platforms

- n8n
- Make.com
- OpenClaw — Basic hands-on experience

AI & LLM Tools

- OpenAI / ChatGPT
- Google Gemini
- Claude
- OpenRouter

Development

- JavaScript
- TypeScript
- Bootstrap
- Node.js
- HTML
- CSS
- PHP
- Laravel

APIs, Data & Backend

- Supabase
- MySQL
- MongoDB
- SQLite
- REST APIs
- JSON
- Webhooks

Development Tools

- Git
- GitHub
- Docker
- Cursor
- Github Copilot

Pyae Sone Phyo

AI Automation Specialist | AI Application & Workflow Development

Portfolio: <https://thecrasho.vercel.app/>

GitHub: <https://github.com/ThecrashO>

LinkedIn: <https://www.linkedin.com/in/pyae-sone-phyo-thecrasho-525820417>

Computer Science undergraduate at the University of Computer Studies, Yangon (UCSY), focused on AI automation, AI agents, workflow development, and AI-assisted software development.

Hands-on experience building business-focused automation systems with n8n and Make.com, integrating LLMs, APIs, Telegram, Google Sheets, Gmail, Notion, and external services.

Interested in understanding real business workflows, identifying repetitive processes, and building practical AI and software solutions that improve operational efficiency.

Seeking an opportunity to contribute to real-world projects while continuing to develop production-oriented AI automation and application development skills.

AUTOMATION PROJECTS

Business AI Automation Suite — Make.com

Built a suite of three AI-powered business automations covering Sales, Customer Support, and Finance Operations.

- AI Lead Qualification Agent — researches, scores, and prioritizes inbound leads.
- AI Knowledge Support Agent — answers Telegram support questions using company knowledge, conversation context, and web-search fallback.
- AI Telegram Invoice Extractor — converts invoice photos and PDFs into structured Google Sheets records with Telegram confirmation.

Technologies: Make.com, AI Agents, RAG, Google Sheets, Telegram, Web Search, APIs

GitHub: <https://github.com/ThecrashO/business-ai-automation-suite>

Private School AI Enrollment Lead Qualification — n8n

Built an n8n-based AI enrollment lead qualification workflow for private schools to help automate student inquiry processing and prioritize high-potential leads.

- Captured and processed incoming enrollment inquiries automatically.
- Used AI to analyze lead information and classify enrollment intent and lead quality.
- Structured lead data for easier follow-up and admissions handling.
- Automated routing and notifications to support faster response from the admissions team.
- Designed the workflow around a real private-school enrollment use case.

Technologies: n8n, AI / LLM, Google Sheets, APIs, Workflow Automation

GitHub: <https://github.com/ThecrashO/private-school-ai-enrollment-lead-qualification>

AVAILABILITY

- Available full-time during the upcoming two-month university break.
- After university resumes, open to continuing in a remote or flexible part-time role, with weekend on-site availability when required.

LANGUAGES

- Myanmar — Native
- English — Intermediate
- Chinese — Beginner

AI APPLICATION PROJECT

VocalT — Secure AI Voice-to-Text Telegram Bot

Built and deployed a production Telegram bot that securely transcribes Burmese, English, and mixed-language audio using user-owned Gemini API keys.

- Designed a user-provided API key flow so each user uses their own Gemini access.
- Built Telegram audio handling and transcription workflows.
- Added secure backend handling with Supabase and server-side processing.
- Deployed the application and supporting guide for real-world use.

Technologies: TypeScript, Node.js, Telegram Bot API, Google Gemini API, Supabase, Vercel, Vitest

Live Bot: https://t.me/VocalT_AI_Bot

Guide: <https://vocalt.vercel.app/guide.html>

SOFTWARE PROJECT

Order2Me — University Canteen Food Ordering Web Application

University project developed to improve the food ordering process for a campus canteen.

- Identified delays, waiting time, and communication issues in the existing phone-based ordering process.
- Designed and developed a web-based ordering system that allows students to browse food items and place orders online.
- Implemented food selection, order submission, delivery notes, payment screenshot upload, and order tracking.
- Built the application around a real university canteen use case for a university project showcase.

Technologies: HTML, CSS, JavaScript, Bootstrap, Supabase

GitHub: <https://github.com/ThecrashO/Order2Me>

AI-ASSISTED DEVELOPMENT & PROBLEM SOLVING

- Understand the business problem and existing workflow before building.
- Identify repetitive or inefficient processes.
- Use AI tools for research, planning, rapid prototyping, coding, debugging, refactoring, and documentation.
- Maintain control over architecture, implementation, testing, validation, and final technical decisions.
- Follow an iterative process of understanding, planning, building, testing, debugging, and improving solutions.
